

# IL2 monoclonal antibody, clone 6B1

Catalog # MAB8101      Size 500 ug

## Specification

|                            |                                                                                         |
|----------------------------|-----------------------------------------------------------------------------------------|
| <b>Product Description</b> | Mouse monoclonal antibody raised against recombinant IL2.                               |
| <b>Immunogen</b>           | Recombinant protein corresponding to human IL2.                                         |
| <b>Host</b>                | Mouse                                                                                   |
| <b>Reactivity</b>          | Human                                                                                   |
| <b>Form</b>                | Lyophilized                                                                             |
| <b>Isotype</b>             | IgG1                                                                                    |
| <b>Recommend Usage</b>     | The optimal working dilution should be determined by the end user.                      |
| <b>Storage Buffer</b>      | Lyophilized from 10 mM PBS                                                              |
| <b>Storage Instruction</b> | Store at -20°C.<br>Aliquot after reconstitution to avoid repeated freezing and thawing. |

## Applications

- Enzyme-linked Immunoabsorbent Assay

## Gene Info — IL2

|                         |                        |
|-------------------------|------------------------|

| <b>Gene Name</b>        | IL2                    |
| <b>Gene Alias</b>       | IL-2, TCGF, lymphokine |
| <b>Gene Description</b> | interleukin 2          |

Omim ID [147680](#)

Gene Ontology [Hyperlink](#)

**Gene Summary**

The protein encoded by this gene is a secreted cytokine that is important for the proliferation of T and B lymphocytes. The receptor of this cytokine is a heterotrimeric protein complex whose gamma chain is also shared by interleukin 4 (IL4) and interleukin 7 (IL7). The expression of this gene in mature thymocytes is monoallelic, which represents an unusual regulatory mode for controlling the precise expression of a single gene. The targeted disruption of a similar gene in mice leads to ulcerative colitis-like disease, which suggests an essential role of this gene in the immune response to antigenic stimuli. [provided by RefSeq]

**Other Designations** T cell growth factor|alderleukin|interleukin-2|involved in regulation of T-cell clonal expansion
