Protein Accession#	O43557

Gene Name	TNFSF14
Gene Alias	CD258, HVEM, LIGHT, LTg, TR2
Gene Description	tumor necrosis factor (ligand) superfamily, member 14
Omim ID	604520
Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene is a member of the tumor necrosis factor (TNF) ligand family. This protein is a ligand for TNFRSF14, which is a member of the tumor necrosis factor receptor superfamily, and which is also known as a herpesvirus entry mediator (HVEM). This protein may function as a costimulatory factor for the activation of lymphoid cells and as a deterrent to infection by herpesvirus. This protein has been shown to stimulate the proliferation of T cells, and trigger apoptosis of various tumor cells. This protein is also reported to prevent tumor necrosis factor alpha mediated apoptosis in primary hepatocyte. Two alternatively spliced transcript variant encoding distinct isoforms have been reported. [provided by RefSeq]
Other Designations	delta transmembrane LIGHT herpesvirus entry mediator A ligand for herpesvirus entry mediator tumor necrosis factor ligand superfamily, member 14 tumor necrosis factor receptor-like 2 tumor necrosis factor superfamily member LIGHT
