

Bioactive

IL5 (Human) Recombinant Protein

Catalog # P7108

Size 10 ug

Applications

Result of activity analysis

Result of activity analysis

Specification

Product Description	Human IL5 (P05113, 20 a.a. - 134 a.a.) partial recombinant protein expressed in CHO cells.
Sequence	IPTEIPTSALVKETLALLSTHRTLLIANETLRIPVPVHKNHQLCTEEIFQGIGTLESQTVQGGTVERLFK NLSLIKKYIDGQKKKCGEERRRVNQFLDYQEF LGVMNTEWIIES
Host	Mammals
Theoretical MW (kDa)	29 - 35
Form	Lyophilized
Preparation Method	Mammalian cell (CHO) expression system_x005F_x000D__x000D__
Purity	> 95% as analyzed by SDS-PAGE. > 95% as analyzed by HPLC.
Endotoxin Level	< 0.2 EU/ugof protein(gel clotting method)
Activity	ED ₅₀ < 1.0 ng/mL, measured in a cell proliferation assay using TF-1 cells, corresponding to a specifi c activity of > 1.0 × 10 ⁶ units/mg.
Recommend Usage	Biological Activity SDS-PAGE The optimal working dilution should be determined by the end user.

Storage Buffer	Lyophilized from PBS. Reconstitute the lyophilized powder in ddH ₂ O up to 100 ug/mL.
Storage Instruction	Store at 4°C to 8°C for 1 week. For long term storage store at -20°C to -80°C. Aliquot to avoid repeated freezing and thawing.
Note	Result of activity analysis Result of activity analysis

Applications

- Functional Study
- SDS-PAGE

Gene Info — IL5

Entrez GeneID	3567
Protein Accession#	P05113
Gene Name	IL5
Gene Alias	EDF, IL-5, TRF
Gene Description	interleukin 5 (colony-stimulating factor, eosinophil)
Omim ID	147850
Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene is a cytokine that acts as a growth and differentiation factor for both B cells and eosinophils. This cytokine is a main regulator of eosinopoiesis, eosinophil maturation and activation. The elevated production of this cytokine is reported to be related to asthma or hypereosinophilic syndromes. The receptor of this cytokine is a heterodimer, whose beta subunit is shared with the receptors for interleukin 3 (IL3) and colony stimulating factor 2 (CSF2/GM-CSF). This gene, together with those for interleukin 4 (IL4), interleukin 13 (IL13), and CSF2, form a cytokine gene cluster on chromosome 5. This cytokine, IL4, and IL13 are found to be regulated coordinately by long-range regulatory elements spread over 120 kilobases on chromosome 5q31. [provided by RefSeq]
Other Designations	B cell differentiation factor I OTTHUMP00000065830 T-cell replacing factor eosinophil differentiation factor interleukin 5 interleukin-5
