Protein Accession#	O00418
Gene Name	EEF2K
Gene Alias	HSU93850, MGC45041, eEF-2K
Gene Description	eukaryotic elongation factor-2 kinase
Omim ID	606968
Gene Ontology	Hyperlink
Gene Summary	This gene encodes a highly conserved protein kinase in the calmodulin-mediated signaling pathway that links activation of cell surface receptors to cell division. This kinase is involved in the regulation of protein synthesis. It phosphorylates eukaryotic elongation factor 2 (EEF2) and thus inhibits the EEF2 function. The activity of this kinase is increased in many cancers and may be a valid target for anti-cancer treatment. [provided by RefSeq]
