

SREBF1 polyclonal antibody (Biotin)

Catalog # PAB15203 Size 100 uL

Specification

Product Description	Rabbit polyclonal antibody raised against synthetic peptide of SREBF1.
Immunogen	A synthetic peptide corresponding to amino acids 300-400 of human SREBF1.
Host	Rabbit
Reactivity	Mouse, Pig, Rat
Specificity	This is specific to SREBP1. By Western blot a band is seen at ~65KDa.
Form	Liquid
Conjugation	Biotin
Recommend Usage	Western Blot (2 ug/mL) The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS
Storage Instruction	Store at 4°C. Do not freeze.

Applications

- Western Blot

Gene Info — SREBF1

Entrez GeneID	6720
Gene Name	SREBF1
Gene Alias	SREBP-1c, SREBP1, bHLHd1

Gene Description	sterol regulatory element binding transcription factor 1
Omim ID	184756
Gene Ontology	Hyperlink
Gene Summary	This gene encodes a transcription factor that binds to the sterol regulatory element-1 (SRE1), which is a decamer flanking the low density lipoprotein receptor gene and some genes involved in sterol biosynthesis. The protein is synthesized as a precursor that is attached to the nuclear membrane and endoplasmic reticulum. Following cleavage, the mature protein translocates to the nucleus and activates transcription by binding to the SRE1. Sterols inhibit the cleavage of the precursor, and the mature nuclear form is rapidly catabolized, thereby reducing transcription. The protein is a member of the basic helix-loop-helix-leucine zipper (bHLH-Zip) transcription factor family. This gene is located within the Smith-Magenis syndrome region on chromosome 17. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq]
Other Designations	sterol regulatory element binding protein-1
