Gene Name	PFKFB2
Gene Alias	DKFZp781D2217, MGC138308, MGC138310, PFK-2/FBPase-2
Gene Description	6-phosphofructo-2-kinase/fructose-2,6-biphosphatase 2
Omim ID	171835
Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene is involved in both the synthesis and degradation of fructose-2,6-bisphosphate, a regulatory molecule that controls glycolysis in eukaryotes. The encoded protein has a 6-phosphofructo-2-kinase activity that catalyzes the synthesis of fructose-2,6-bisphosphate, and a fructose-2,6-biphosphatase activity that catalyzes the degradation of fructose-2,6-bisphosphate. This protein regulates fructose-2,6-bisphosphate levels in the heart, while a related enzyme encoded by a different gene regulates fructose-2,6-bisphosphate levels in the liver and muscle. This enzyme functions as a homodimer. Two transcript variants encoding two different isoforms have been found for this gene. [provided by RefSeq]
