

MRPS36 polyclonal antibody

Catalog # PAB17767 Size 100 ug

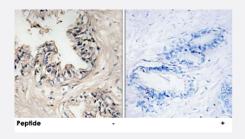

Applications

Western Blot (Cell lysate)

Western blot analysis of extracts from HepG2 cells, using MRPS36 polyclonal antibody (Cat # PAB17767).

Peptide "+" means "with peptide blocking".

Immunohistochemistry (Formalin/PFA-fixed paraffinembedded sections)

Immunohistochemistry analysis of paraffin-embedded human breast carcinoma tissue using MRPS36 polyclonal antibody (Cat # PAB17767).

Peptide "+" means "with peptide blocking".

Specification	
Product Description	Rabbit polyclonal antibody raised against synthetic peptide of MRPS36.
Immunogen	A synthetic peptide corresponding to internal of human MRPS36.
Host	Rabbit
Reactivity	Human
Specificity	This antibody detects endogenous levels of total MRPS36 protein
Form	Liquid

Product Information

Recommend Usage	Western Blot (1:500-1:1000) Immunohistochemistry (1:50-1:100) ELISA (1:10000) The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS, pH 7.4 (150mM NaCl, 0.02% sodium azide, 50% glycerol)
Storage Instruction	Store at -20°C. Aliquot to avoid repeated freezing and thawing.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which shoul d be handled by trained staff only.

Applications

Western Blot (Cell lysate)

Gene Info — MRPS36

Gene Ontology

Western blot analysis of extracts from HepG2 cells, using MRPS36 polyclonal antibody (Cat # PAB17767). Peptide "+" means "with peptide blocking".

Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Hyperlink

Immunohistochemistry analysis of paraffin-embedded human breast carcinoma tissue using MRPS36 polyclonal antibody (Cat # PAB17767).

Peptide "+" means "with peptide blocking".

Enzyme-linked Immunoabsorbent Assay

Entrez GenelD	<u>92259</u>
Protein Accession#	P82909
Gene Name	MRPS36
Gene Alias	DC47, MGC22896, MRP-S36
Gene Description	mitochondrial ribosomal protein S36

Product Information

Gene Summary

Mammalian mitochondrial ribosomal proteins are encoded by nuclear genes and help in protein s ynthesis within the mitochondrion. The mitochondrial ribosome (mitoribosome) consists of a small 28S subunit and a large 39S subunit. They have an estimated 75% protein to rRNA composition c ompared to prokaryotic ribosomes, where this ratio is reversed. Another difference between mam malian mitoribosomes and prokaryotic ribosomes is that the latter contain a 5S rRNA. Among diff erent species, the proteins comprising the mitoribosome differ greatly in sequence, and sometim es in biochemical properties, which prevents easy recognition by sequence homology. This gene encodes a 28S subunit protein. Pseudogenes corresponding to this gene are found on chromosomes 3p, 4q, 8p, 11q, 12q, and 20p. [provided by RefSeq
