Gene Info — MMP1

Entrez GeneID	4312
Gene Name	MMP1
Gene Alias	CLG, CLGN
Gene Description	matrix metalloproteinase 1 (interstitial collagenase)
Omim ID	120353 606963
Gene Ontology	Hyperlink

Gene Summary	Proteins of the matrix metalloproteinase (MMP) family are involved in the breakdown of extracellular matrix in normal physiological processes, such as embryonic development, reproduction, and tissue remodeling, as well as in disease processes, such as arthritis and metastasis. Most MMP's are secreted as inactive proproteins which are activated when cleaved by extracellular proteinases. This gene encodes a secreted enzyme which breaks down the interstitial collagens, types I, II, and III. The gene is part of a cluster of MMP genes which localize to chromosome 11q22.3. Alternative splicing results in multiple transcript variants.[provided by RefSeq]
