Gene Name	SOX18
Gene Alias	HLTS
Gene Description	SRY (sex determining region Y)-box 18

Gene Summary	This gene encodes a member of the SOX (SRY-related HMG-box) family of transcription factors i nvolved in the regulation of embryonic development and in the determination of the cell fate. The e ncoded protein may act as a transcriptional regulator after forming a protein complex with other proteins. This protein plays a role in hair, blood vessel, and lymphatic vessel development. Mutation s in this gene have been associated with recessive and dominant forms of hypotrichosis-lymphed ema-telangiectasia. [provided by RefSeq
