

TLR4 polyclonal antibody

Catalog # PAB30269 Size 100 uL

Applications

Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunohistochemical staining (Formalin-fixed paraffin-embedded sections) of human spleen with TLR4 polyclonal antibody (Cat # PAB30269) shows distinct cytoplasmic positivity in subsets of cells in the red pulp.

Specification

Product Description	Rabbit polyclonal antibody raised against partial recombinant human TLR4.
Immunogen	Recombinant protein corresponding to amino acids 522-612 of human TLR4.
Sequence	LQVLNMSHNNFFSLDTPYKCLNSLQVLDYSLNHIMTSKKQELQHFPSSLAFLNLTQNDFACTCE HQSFLQWIKDQRQLLEVERMECATP
Host	Rabbit
Reactivity	Human
Form	Liquid
Purification	Antigen affinity purification
Isotype	IgG
Recommend Usage	Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections) (1:50 - 1:200) The optimal working dilution should be determined by the end user.

Storage Buffer	In PBS, pH 7.2 (40% glycerol, 0.02% sodium azide).
Storage Instruction	Store at 4°C for short term storage. For long term storage store at -20°C. Aliquot to avoid repeated freezing and thawing.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunohistochemical staining (Formalin-fixed paraffin-embedded sections) of human spleen with TLR4 polyclonal antibody (Cat # PAB30269) shows distinct cytoplasmic positivity in subsets of cells in the red pulp.

Gene Info — TLR4

Entrez GeneID	7099
Protein Accession#	O00206
Gene Name	TLR4
Gene Alias	ARMD10, CD284, TOLL, hToll
Gene Description	toll-like receptor 4
Omim ID	603030
Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene is a member of the Toll-like receptor (TLR) family which plays a fundamental role in pathogen recognition and activation of innate immunity. TLRs are highly conserved from Drosophila to humans and share structural and functional similarities. They recognize pathogen-associated molecular patterns (PAMPs) that are expressed on infectious agents, and mediate the production of cytokines necessary for the development of effective immunity. The various TLRs exhibit different patterns of expression. This receptor is most abundantly expressed in placenta, and in myelomonocytic subpopulation of the leukocytes. It has been implicated in signal transduction events induced by lipopolysaccharide (LPS) found in most gram-negative bacteria. Mutations in this gene have been associated with differences in LPS responsiveness. Also, several transcript variants of this gene have been found, but the protein coding potential of most of them is uncertain. [provided by RefSeq]
Other Designations	OTTHUMP00000022807 homolog of Drosophila toll
