Gene Name	NPPA
Gene Alias	ANF, ANP, ATFB6, CDD-ANF, PND
Gene Description	natriuretic peptide precursor A
Omim ID	108780
Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene belongs to the natriuretic peptide family. Natriuretic peptides are implicated in the control of extracellular fluid volume and electrolyte homeostasis. This protein is synthesized as a large precursor (containing a signal peptide), which is processed to release a peptide from the N-terminus with similarity to vasoactive peptide, cardiodilatin, and another peptide from the C-terminus with natriuretic-diuretic activity. Mutations in this gene have been associated with atrial fibrillation familial type 6. [provided by RefSeq]
