Gene Description ring finger protein 13

Omim ID [609247](#)

Gene Ontology [Hyperlink](#)

Gene Summary The protein encoded by this gene contains a RING zinc finger, a motif known to be involved in protein-protein interactions. The specific function of this gene has not yet been determined. Alternatively spliced transcript variants that encode the same protein have been reported. A pseudogene, which is also located on chromosome 3, has been defined for this gene. [provided by RefSeq]
