

MMP7 polyclonal antibody

Catalog # PAB6849

Size 100 ug

Applications

Western Blot (Tissue lysate)

MMP7 polyclonal antibody (Cat # PAB6849) (0.03 ug/mL) staining of human breast lysate (35 ug protein in RIPA buffer). Primary incubation was 1 hour. Detected by chemiluminescence.

Specification

Product Description Goat polyclonal antibody raised against synthetic peptide of MMP7.

Immunogen A synthetic peptide corresponding to human MMP7.

Sequence C-QKLYGKRSNSRKK

Host Goat

Theoretical MW (kDa) 29.7

Reactivity Human

Form Liquid

Purification Antigen affinity purification

Concentration 0.5 mg/mL

Quality Control Testing Antibody Reactive Against Synthetic Peptide.

Recommend Usage
ELISA (1:64000)
Western Blot (0.03-0.1 ug/mL)
The optimal working dilution should be determined by the end user.

Storage Buffer	In Tris saline, pH 7.3 (0.5% BSA, 0.02% sodium azide)
Storage Instruction	Store at -20°C. Aliquot to avoid repeated freezing and thawing.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Western Blot (Tissue lysate)

MMP7 polyclonal antibody (Cat # PAB6849) (0.03 ug/mL) staining of human breast lysate (35 ug protein in RIPA buffer). Primary incubation was 1 hour. Detected by chemiluminescence.

- Enzyme-linked Immunoabsorbent Assay

Gene Info — MMP7

Entrez GeneID	4316
Protein Accession#	NP_002414.1
Gene Name	MMP7
Gene Alias	MMP-7, MPST1, PUMP-1
Gene Description	matrix metalloproteinase 7 (matrilysin, uterine)
Omim ID	178990
Gene Ontology	Hyperlink

Gene Summary	Proteins of the matrix metalloproteinase (MMP) family are involved in the breakdown of extracellular matrix in normal physiological processes, such as embryonic development, reproduction, and tissue remodeling, as well as in disease processes, such as arthritis and metastasis. Most MMP's are secreted as inactive proproteins which are activated when cleaved by extracellular proteinases. The enzyme encoded by this gene degrades proteoglycans, fibronectin, elastin and casein and differs from most MMP family members in that it lacks a conserved C-terminal protein domain. The enzyme is involved in wound healing, and studies in mice suggest that it regulates the activity of defensins in intestinal mucosa. The gene is part of a cluster of MMP genes which localize to chromosome 11q22.3. [provided by RefSeq]
