

RecomAb™

GPX1 recombinant monoclonal antibody, clone R06-0H1

Catalog # RAB01442 Size 100 uL

Applications

Western Blot

Western blot analysis of Glutathione Peroxidase 1 in A549, HL-60 lysates using Glutathione Peroxidase 1 antibody.

Immunocytochemistry

Immunocytochemistry staining of HeLa cells with GPX1 recombinant monoclonal antibody, clone R06-0H1 (Cat # RAB01442).

Specification

Product Description	Rabbit recombinant monoclonal antibody raised against human GPX1.
Antibody Species	Rabbit
Immunogen	Original antibody is raised against recombinant protein corresponding to human GPX1.

Theoretical MW (kDa)	Calculated MW: 22 kD
Reactivity	Human
Form	Liquid
Purification	Affinity purification
Isotype	IgG
Recommend Usage	Immunocytochemistry Immunofluorescence Immunoprecipitation Western Blot The optimal working dilution should be determined by the end user.
Storage Buffer	In 50mM Tris-Glycine, pH 7.4, (0.15M NaCl, 40% Glycerol, 0.01% Sodium azide and 0.05% BSA)
Storage Instruction	Store at 4°C. For longer storage, aliquot and store at -20°C. Aliquot to avoid repeated freezing and thawing.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Western Blot

Western blot analysis of Glutathione Peroxidase 1 in A549, HL-60 lysates using Glutathione Peroxidase 1 antibody.

- Immunocytochemistry

Immunocytochemistry staining of HeLa cells with GPX1 recombinant monoclonal antibody, clone R06-0H1 (Cat # RAB01442).

- Immunofluorescence

- Immunoprecipitation

Gene Info — GPX1

Entrez GeneID	2876
Protein Accession#	P07203
Gene Name	GPX1

Gene Alias	GSHPX1, MGC14399, MGC88245
Gene Description	glutathione peroxidase 1
Omim ID	138320
Gene Ontology	Hyperlink
Gene Summary	This gene encodes a member of the glutathione peroxidase family. Glutathione peroxidase functions in the detoxification of hydrogen peroxide, and is one of the most important antioxidant enzymes in humans. This protein is one of only a few proteins known in higher vertebrates to contain selenocysteine, which occurs at the active site of glutathione peroxidase and is coded by UGA, that normally functions as a translation termination codon. In addition, this protein is characterized in a polyalanine sequence polymorphism in the N-terminal region, which includes three alleles with five, six or seven alanine (ALA) repeats in this sequence. The allele with five ALA repeats is significantly associated with breast cancer risk. Two alternatively spliced transcript variants encoding distinct isoforms have been found for this gene. [provided by RefSeq]
Other Designations	cellular glutathione peroxidase
