

RecomAb™

CYP2D6 recombinant monoclonal antibody

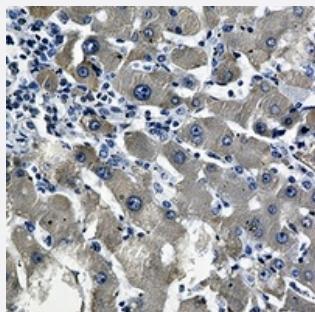

Catalog # RAB02584 Size 100 uL

Applications

Western Blot (Cell lysate)

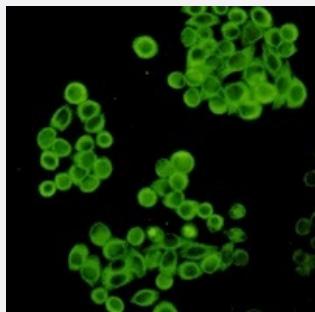

Western blot analysis of Hela (A), A549 (B), HL60 (C), U251 (D), U87MG (E) whole cell lysates with CYP2D6 recombinant monoclonal antibody (Cat # RAB02584).

Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunohistochemical analysis of human liver cancer formalin fixed paraffin embedded tissue section using CYP2D6 recombinant monoclonal antibody (Cat # RAB02584). The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.73). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

Immunofluorescence

Immunofluorescent analysis of HeLa cells with CYP2D6 recombinant monoclonal antibody (Cat # RAB02584). Formalin-fixed cells were permeabilized with 0.1% Triton X-100 in TBS for 5-10 minutes and blocked with 3% BSA-PBS for 30 minutes at room temperature. Cells were probed with the primary antibody in 3% BSA-PBS and incubated overnight at 4 °C in a humidified chamber. Cells were washed with PBST and incubated with a AF488-conjugated secondary antibody (green) in PBS at room temperature in the dark.

Gene Summary	This gene encodes a member of the cytochrome P450 superfamily of enzymes. The cytochrome P450 proteins are monooxygenases which catalyze many reactions involved in drug metabolism and synthesis of cholesterol, steroids and other lipids. This protein localizes to the endoplasmic reticulum and is known to metabolize as many as 20% of commonly prescribed drugs. Its substrates include debrisoquine, an adrenergic-blocking drug; sparteine and propafenone, both anti-arrhythmic drugs; and amitriptyline, an anti-depressant. The gene is highly polymorphic in the population; certain alleles result in the poor metabolizer phenotype, characterized by a decreased ability to metabolize the enzyme's substrates. The gene is located near two cytochrome P450 pseudogenes on chromosome 22q13.1. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. Other Designations	cytochrome P450 2D6 cytochrome P450, subfamily IID (debrisoquine, sparteine, etc., -metabolizing), polypeptide 6 cytochrome P450, subfamily IID (debrisoquine, sparteine, etc., -metabolizing)-like 1 debrisoquine 4-hydroxylase flavoprotein-linked monooxygen
