

RecomAb™

MAP2K1/MAP2K2 recombinant monoclonal antibody, clone MEK12S221-D3

Catalog # RAB02830 Size 200 uL

Applications

Western Blot

Western blot analysis of HT1080 cell extract untreated or treated with TPA using 0.1 ug/mL Phospho-MEK1/2 (Ser221) antibody MEK12S221-D3.

Flow Cytometry

Flow cytometric analysis of HeLa cells secondary antibody only negative control (blue) or treated with imatinib (red) or with pervanadate (green) using Phospho-MEK1/2 (S221) antibody MEK12S221-D3 0.1 ug/mL.

Specification

Product Description	Rabbit recombinant monoclonal antibody raised against human MAP2K1 MAP2K2.
Antibody Species	Rabbit
Immunogen	A synthetic phospho-peptide corresponding to residues surrounding Ser221 of human phospho MEK1/2.
Reactivity	Human

Form	Liquid
Purification	Protein A+G
Isotype	Rabbit IgG1k
Recommend Usage	Flow Cytometry Western Blot The optimal working dilution should be determined by the end user.
Storage Buffer	1X PBS, 0.02% Sodium azide, 50% Glycerol, 0.1% BSA
Storage Instruction	Store at -20°C. Aliquot to avoid repeated freezing and thawing.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Western Blot

Western blot analysis of HT1080 cell extract untreated or treated with TPA using 0.1 ug/mL Phospho-MEK1/2 (Ser221) antibody MEK12S221-D3.

- Flow Cytometry

Flow cytometric analysis of HeLa cells secondary antibody only negative control (blue) or treated with imatinib (red) or with pervanadate (green) using Phospho-MEK1/2 (S221) antibody MEK12S221-D3 0.1 ug/mL.

Gene Info — MAP2K1

Entrez GeneID	5604
Protein Accession#	Q02750 P36507
Gene Name	MAP2K1
Gene Alias	MAPKK1, MEK1, MKK1, PRKMK1
Gene Description	mitogen-activated protein kinase kinase 1
Omim ID	176872
Gene Ontology	Hyperlink

Gene Summary

The protein encoded by this gene is a member of the dual specificity protein kinase family, which acts as a mitogen-activated protein (MAP) kinase kinase. MAP kinases, also known as extracellular signal-regulated kinases (ERKs), act as an integration point for multiple biochemical signals. This protein kinase lies upstream of MAP kinases and stimulates the enzymatic activity of MAP kinases upon wide variety of extra- and intracellular signals. As an essential component of MAP kinase signal transduction pathway, this kinase is involved in many cellular processes such as proliferation, differentiation, transcription regulation and development. [provided by RefSeq]

Other Designations

protein kinase, mitogen-activated, kinase 1 (MAP kinase kinase 1)

Gene Summary

The protein encoded by this gene is a dual specificity protein kinase that belongs to the MAP kinase kinase family. This kinase is known to play a critical role in mitogen growth factor signal transduction. It phosphorylates and thus activates MAPK1/ERK2 and MAPK2/ERK3. The activation of this kinase itself is dependent on the Ser/Thr phosphorylation by MAP kinase kinase kinases. Mutations in this gene cause cardiofaciocutaneous syndrome (CFC syndrome), a disease characterized by heart defects, mental retardation, and distinctive facial features similar to those found in Noonan syndrome. The inhibition or degradation of this kinase is also found to be involved in the pathogenesis of Yersinia and anthrax. A pseudogene, which is located on chromosome 7, has been identified for this gene. [provided by RefSeq]
