

RecomAb™

# RPS6 recombinant monoclonal antibody, clone S6RPS240244-CD10 (PE)

Catalog # RAB03053      Size 100 Reactions

## Applications

### Flow Cytometry

Flow cytometric analysis of K562 cells untreated and stained as negative control (blue) or untreated (red) or treated with EGF (green) using Phospho-S6 ribosomal protein (Ser240/Ser244) antibody S6S240S244-CD10 PE conjugate.

## Specification

<b>Product Description</b>	Rabbit recombinant monoclonal antibody raised against human RPS6.
<b>Antibody Species</b>	Rabbit
<b>Immunogen</b>	A synthetic phospho-peptide corresponding to residues surrounding Ser240/244 of human phospho S6 Ribosomal protein
<b>Reactivity</b>	Human
<b>Form</b>	Liquid
<b>Conjugation</b>	PE
<b>Purification</b>	Protein A purification, Protein G purification
<b>Isotype</b>	IgG
<b>Recommend Usage</b>	Flow Cytometry The optimal working dilution should be determined by the end user.

<b>Storage Buffer</b>	1X PBS, 0.09% Sodium azide, 0.2% BSA
<b>Storage Instruction</b>	Store at 4°C. Do not freeze.
<b>Note</b>	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

## Applications

- Flow Cytometry

Flow cytometric analysis of K562 cells untreated and stained as negative control (blue) or untreated (red) or treated with EGF (green) using Phospho-S6 ribosomal protein (Ser240/Ser244) antibody S6S240S244-CD10 PE conjugate.

## Gene Info — RPS6

<b>Entrez GeneID</b>	<a href="#">6194</a>
<b>Protein Accession#</b>	<a href="#">P62753</a>
<b>Gene Name</b>	RPS6
<b>Gene Alias</b>	-
<b>Gene Description</b>	ribosomal protein S6
<b>Omim ID</b>	<a href="#">180460</a>
<b>Gene Ontology</b>	<a href="#">Hyperlink</a>

**Gene Summary**

Ribosomes, the organelles that catalyze protein synthesis, consist of a small 40S subunit and a large 60S subunit. Together these subunits are composed of 4 RNA species and approximately 80 structurally distinct proteins. This gene encodes a cytoplasmic ribosomal protein that is a component of the 40S subunit. The protein belongs to the S6E family of ribosomal proteins. It is the major substrate of protein kinases in the ribosome, with subsets of five C-terminal serine residues phosphorylated by different protein kinases. Phosphorylation is induced by a wide range of stimuli, including growth factors, tumor-promoting agents, and mitogens. Dephosphorylation occurs at growth arrest. The protein may contribute to the control of cell growth and proliferation through the selective translation of particular classes of mRNA. As is typical for genes encoding ribosomal proteins, there are multiple processed pseudogenes of this gene dispersed through the genome. [provided by RefSeq]

<b>Other Designations</b>	40S ribosomal protein S6 OTTHUMP00000021120 phosphoprotein NP33
