

RecomAb™

CCR5 recombinant monoclonal antibody, clone T21/8

Catalog # RAB03129 Size 200 ug

Applications

Immunofluorescence

Immunofluorescent staining of U937 cells with CCR5 recombinant monoclonal antibody, clone T21/8 (Cat # RAB03129).

Immunofluorescence analysis of paraformaldehyde fixed U937 cells on Shi-fix™ coverslips stained with the chimeric r version of RAB03129 at 10 ug/ml for 1h followed by Alexa Fluor® 488 secondary antibody (2 ug/ml)- showing membrane staining. The nuclear stain is DAPI (blue). Panels show from left-right- top-bottom RAB03129- DAPI- merged channels and an isotype control. The isotype control was an unknown specificity antibody (.1) followed by staining with Alexa Fluor® 488 secondary antibody.

Flow Cytometry

Flow cytometric analysis of U937 cells with CCR5 recombinant monoclonal antibody, clone T21/8 (Cat # RAB03129).

Paraformaldehyde fixed U937 cells were stained with anti-unknown specificity antibody (3.0; isotype control- black line) or the r version of T21/8 (RAB03129- blue line) at a dilution of 1:100 for 1h at RT. After washing- the bound antibody was detected using a goat anti-r AlexaFluor® 488 antibody at a dilution of 1:1000 and cells analyzed using a FACSCanto flow-cytometer.

Specification

Product Description	Rabbit recombinant monoclonal antibody raised against human CCR5.
Antibody Species	Rabbit
Immunogen	Original antibody is raised against RBL-CCR5 cells.
Reactivity	Human

Form	Liquid
Isotype	IgG
Recommend Usage	ELISA Flow Cytometry Immunofluorescence Immunoprecipitation Western Blot The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS with 0.02% Proclin 300
Storage Instruction	Store at 4°C for up to 3 months. For longer storage, aliquot and store at -20°C. Aliquot to avoid repeated freezing and thawing.

Applications

- Western Blot

- Immunofluorescence

Immunofluorescent staining of U937 cells with CCR5 recombinant monoclonal antibody, clone T21/8 (Cat # RAB03129). Immunofluorescence analysis of paraformaldehyde fixed U937 cells on Shi-fix™ coverslips stained with the chimeric r version of RAB03129 at 10 ug/ml for 1h followed by Alexa Fluor® 488 secondary antibody (2 ug/ml)- showing membrane staining. The nuclear stain is DAPI (blue). Panels show from left-right- top-bottom RAB03129- DAPI- merged channels and an isotype control. The isotype control was an unknown specificity antibody (.1) followed by staining with Alexa Fluor® 488 secondary antibody.

- Immunoprecipitation

- Enzyme-linked Immunoabsorbent Assay

- Flow Cytometry

Flow cytometric analysis of U937 cells with CCR5 recombinant monoclonal antibody, clone T21/8 (Cat # RAB03129). Paraformaldehyde fixed U937 cells were stained with anti-unknown specificity antibody (3.0; isotype control- black line) or the r version of T21/8 (RAB03129- blue line) at a dilution of 1:100 for 1h at RT. After washing- the bound antibody was detected using a goat anti-r AlexaFluor® 488 antibody at a dilution of 1:1000 and cells analyzed using a FACSCanto flow-cytometer.

Gene Info — CCR5

Entrez GeneID	1234
Gene Name	CCR5
Gene Alias	CC-CKR-5, CCCKR5, CD195, CKR-5, CKR5, CMKBR5, IDDM22

Gene Description	chemokine (C-C motif) receptor 5
Omim ID	601373 610379
Gene Ontology	Hyperlink
Gene Summary	This gene encodes a member of the beta chemokine receptor family, which is predicted to be a seven transmembrane protein similar to G protein-coupled receptors. This protein is expressed by T cells and macrophages, and is known to be an important co-receptor for macrophage-tropic virus, including HIV, to enter host cells. Defective alleles of this gene have been associated with the HIV infection resistance. The ligands of this receptor include monocyte chemoattractant protein 2 (MCP-2), macrophage inflammatory protein 1 alpha (MIP-1 alpha), macrophage inflammatory protein 1 beta (MIP-1 beta) and regulated on activation normal T expressed and secreted protein (RANTES). Expression of this gene was also detected in a promyeloblastic cell line, suggesting that this protein may play a role in granulocyte lineage proliferation and differentiation. This gene is located at the chemokine receptor gene cluster region. Two transcript variants encoding the same protein have been found for this gene. [provided by RefSeq]
Other Designations	C-C chemokine receptor 5 C-C chemokine receptor type 5 CCR5 chemokine receptor chemokine (C-C) receptor 5 chemokine receptor CCR5 chemr13
