

RecomAb™

IL2 recombinant monoclonal antibody, clone LNKB-2

Catalog # RAB03577 Size 200 ug

Applications

Western Blot

Western blot analysis of Lane 1: human peripheral blood monocyte (untreated), Lane 2: human peripheral blood monocyte (treated with PMA/Ionomycin), Lane 3: human spleen, Lane 4: human thymus, Lane 5: Jurkat cell and Lane 6: Molt4 cell with IL2 recombinant monoclonal antibody, clone LNKB-2 (Cat # RAB03577).

Western Blot analysis the lysates (35ug protein in RIPA buffer) were resolved on a 15% SDS PAGE gel and blots probed with the chimeric r version of RAB03577 at 1 ug/mL (Lane 1-2) or 0.1 ug/mL (Lane 3-6) before detection using an anti-rondary antibody. Protein was detected by chemiluminescence.

Gene Summary	The protein encoded by this gene is a secreted cytokine that is important for the proliferation of T and B lymphocytes. The receptor of this cytokine is a heterotrimeric protein complex whose gamma chain is also shared by interleukin 4 (IL4) and interleukin 7 (IL7). The expression of this gene in mature thymocytes is monoallelic, which represents an unusual regulatory mode for controlling the precise expression of a single gene. The targeted disruption of a similar gene in mice leads to ulcerative colitis-like disease, which suggests an essential role of this gene in the immune response to antigenic stimuli.
