

RecomAb™

TP53 recombinant monoclonal antibody, clone TP53/1799R

Catalog # RAB03826 Size 100 ug

Applications

Western Blot

Western blot analysis of human HeLa cell lysate using anti-p53 recombinant monoclonal antibody, clone TP53/1799R (Cat # RAB03826).

Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunohistochemistry (Formalin-fixed paraffin-embedded sections) of human colon carcinoma with anti-p53 recombinant monoclonal antibody, clone TP53/1799R (Cat # RAB03826).

Human Protein Microarray Specificity Validation

Antibody Microarray

Analysis of HuProt(TM) microarray containing more than 19,000 full-length human proteins using recombinant p53 antibody, clone TP53/1799R (Cat # RAB03826).

Specification

Product Description	Rabbit recombinant monoclonal antibody raised against recombinant human p53 protein.
Antibody Species	Rabbit
Immunogen	Original antibody is raised against recombinant protein corresponding to recombinant human p53 protein
Reactivity	Human
Form	Liquid
Conjugation	Unconjugated
Purification	Protein A affinity chromatography
Concentration	0.2 mg/mL
Isotype	IgG
Recommend Usage	Human protein microarray Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)(0.25-0.5 ug/mL for 30 min at RT) Western Blot (0.5-1 ug/mL) The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS, 0.1 mg/ml BSA, 0.05% sodium azide
Storage Instruction	Store at 2~8°C. Aliquot to avoid repeated freezing and thawing.
Note	Optimal dilutions for each application to be determined by the researcher

Applications

- Western Blot

Western blot analysis of human HeLa cell lysate using anti-p53 recombinant monoclonal antibody, clone TP53/1799R (Cat # RAB03826).

- Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunohistochemistry (Formalin-fixed paraffin-embedded sections) of human colon carcinoma with anti-p53 recombinant monoclonal antibody, clone TP53/1799R (Cat # RAB03826).

- Antibody Microarray

Analysis of HuProt(TM) microarray containing more than 19,000 full-length human proteins using recombinant p53 antibody, clone TP53/1799R (Cat # RAB03826).

Gene Ontology [Hyperlink](#)

Gene Summary

This gene encodes tumor protein p53, which responds to diverse cellular stresses to regulate target genes that induce cell cycle arrest, apoptosis, senescence, DNA repair, or changes in metabolism. p53 protein is expressed at low level in normal cells and at a high level in a variety of transformed cell lines, where it's believed to contribute to transformation and malignancy. p53 is a DNA-binding protein containing transcription activation, DNA-binding, and oligomerization domains. It is postulated to bind to a p53-binding site and activate expression of downstream genes that inhibit growth and/or invasion, and thus function as a tumor suppressor. Mutants of p53 that frequently occur in a number of different human cancers fail to bind the consensus DNA binding site, and hence cause the loss of tumor suppressor activity. Alterations of this gene occur not only as somatic mutations in human malignancies, but also as germline mutations in some cancer-prone families with Li-Fraumeni syndrome. Multiple p53 variants due to alternative promoters and multiple alternative splicing have been found. These variants encode distinct isoforms, which can regulate p53 transcriptional activity. [provided by RefSeq]

Other Designations p53 antigen|p53 transformation suppressor|p53 tumor suppressor|phosphoprotein p53|transformation-related protein 53
