Affinity Magnetic High Throughput Immunoprecipitation

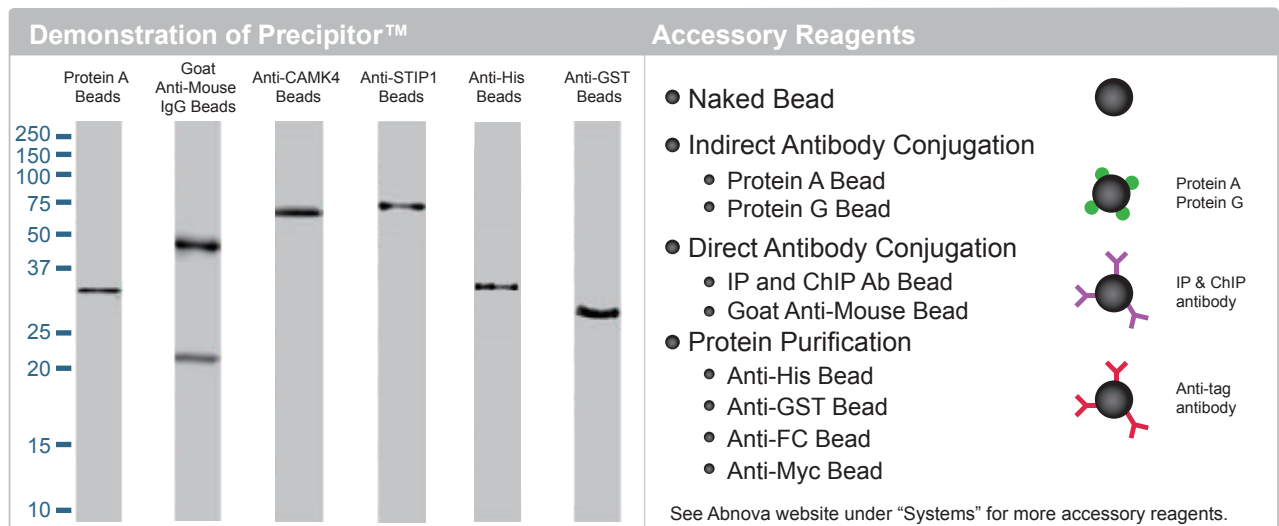

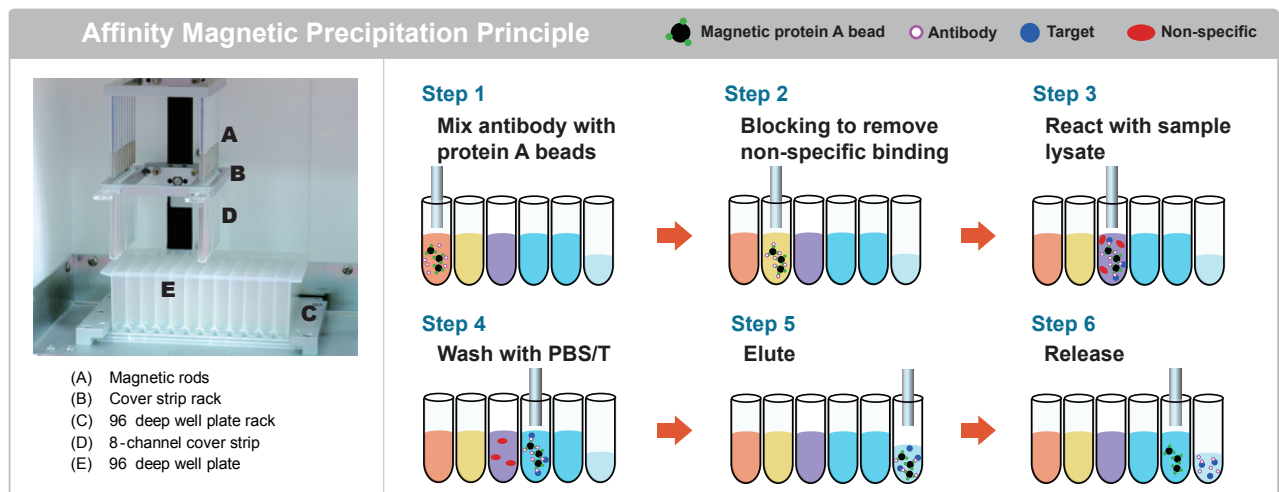

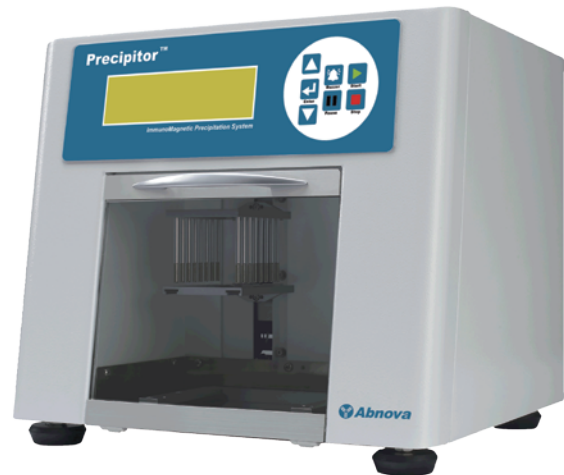

Abnova's Precipitor™ system is automated magnetic bead platform for high throughput precipitation and purification of proteins. Combining 96 deep well plate with affinity conjugated magnetic beads, Precipitor™ easily handles 16 different assays simultaneously by transferring beads from one well to the next for mixing, binding, washing, and elution reactions via the robotic action of parallel magnetic rods. It simplifies the routine yet labor intensive process, and addresses the needs of rigorous proteomic screening and biomarker discovery applications such as immunoprecipitation (IP, ChIP, RiP), recombinant protein purification, and protein-protein interaction. Precipitor™ delivers reproducible and consistent results by obviating the drawbacks of manual operation. Its integrated onscreen display allows easy change of parameters tailored to your experiment. Moreover, you can select from large scope of available antibodies reagents to accelerate your research!

Applications

- Immunoprecipitation
- Chromatin-Immunoprecipitation
- RNA-Immunoprecipitation
- Recombinant Protein Purification
- Protein-Protein Interaction

Advantages

- Rapid, multi-step automation
- Compatible with 96 well plate format
- Reproducibility and consistency of results
- Multiplex analysis of up to 16 analytes
- No external device or PC required

Immunoprecipitation Kits

Cat. Num.	Product Name	Product Description
KA0568	Protein A Agarose Immunoprecipitation Kit	Protein A Immunoprecipitation Kit is designed to provide a versatile set of reagents, protease inhibitors, and Protein A Agarose that can be used for a variety of applications. Sufficient reagents are provided to lyse cells, solubilize and immunoprecipitate antigens from 20 x 1 mL cell aliquots with extra volume supplied for additional wash formulations.
KA0569	Protein G Agarose Immunoprecipitation Kit	Protein G Immunoprecipitation Kit is designed to provide a versatile set of reagents, protease inhibitors, and Protein G Agarose that can be used for a variety of applications. Sufficient reagents are provided to lyse cells, solubilize and immunoprecipitate antigens from 20 x 1 ml cell aliquots with extra volume supplied for additional wash formulations.
