Gene Info — NAT2

Entrez GeneID	10
GeneBank Accession#	BC015878.1
Protein Accession#	AAH15878.1
Gene Name	NAT2
Gene Alias	AAC2, PNAT
Gene Description	N-acetyltransferase 2 (arylamine N-acetyltransferase)
Omim ID	243400
Gene Ontology	Hyperlink
Gene Summary	This gene encodes an enzyme that functions to both activate and deactivate arylamine and hydraz ine drugs and carcinogens. Polymorphisms in this gene are responsible for the N-acetylation poly morphism in which human populations segregate into rapid, intermediate, and slow acetylator ph enotypes. Polymorphisms in this gene are also associated with higher incidences of cancer and d rug toxicity. A second arylamine N-acetyltransferase gene (NAT1) is located near this gene (NAT 2). [provided by RefSeq
Other Designations	N-acetyltransferase 2|arylamide acetylase 2|arylamine N-acetyltransferase 2
