Gene Summary	This gene encodes a member of the Abelson family of nonreceptor tyrosine protein kinase. The pr otein is highly similar to the ABL1 protein, including the tyrosine kinase, SH2 and SH3 domains, a nd has a role in cytoskeletal rearrangements by its C-terminal F-actin- and microtubule-binding se quences. This gene is expressed in both normal and tumor cells, and is involved in translocation w ith the ETV6 gene in leukemia. Multiple alternatively spliced transcript variants encoding different protein isoforms have been found for this gene. [provided by RefSeq
