Gene Info — IL1B

Entrez GeneID	3553
Gene Name	IL1B
Gene Alias	IL-1, IL1-BETA, IL1F2
Gene Description	interleukin 1, beta
Omim ID	137215 147720
Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene is a member of the interleukin 1 cytokine family. This cytokine is produced by activated macrophages as a proprotein, which is proteolytically processed to its acti ve form by caspase 1 (CASP1/ICE). This cytokine is an important mediator of the inflammatory re sponse, and is involved in a variety of cellular activities, including cell proliferation, differentiation, and apoptosis. The induction of cyclooxygenase-2 (PTGS2/COX2) by this cytokine in the central n ervous system (CNS) is found to contribute to inflammatory pain hypersensitivity. This gene and ei ght other interleukin 1 family genes form a cytokine gene cluster on chromosome 2. [provided by RefSeq
