RecomAb™

PCNA recombinant monoclonal antibody

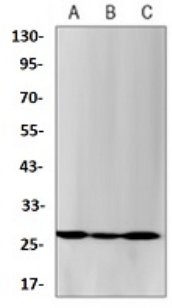

Catalog # RAB02530 Size 100 uL

Applications

Immunofluorescence

Immunofluorescent analysis of HeLa cells with PCNA recombinant monoclonal antibody (Cat # RAB02530). Formalin-fixed cells were permeabilized with 0.1% Triton X-100 in TBS for 5-10 minutes and blocked with 3% BSA-PBS for 30 minutes at room temperature. Cells were probed with the primary antibody in 3% BSA-PBS and incubated overnight at 4 °C in a hidified chamber. Cells were washed with PBST and incubated with a AF488-conjugated secondary antibody (green) in PBS at room temperature in the dark.

Western Blot

Western blot analysis of mouse spleen (A), K562 (B), C6 (C) whole cell lysates with PCNA recombinant monoclonal antibody (Cat # RAB02530).

Gene Summary	The protein encoded by this gene is found in the nucleus and is a cofactor of DNA polymerase del ta. The encoded protein acts as a homotrimer and helps increase the processivity of leading stran d synthesis during DNA replication. In response to DNA damage, this protein is ubiquitinated and is involved in the RAD6-dependent DNA repair pathway. Two transcript variants encoding the sa me protein have been found for this gene. Pseudogenes of this gene have been described on chr omosome 4 and on the X chromosome. [provided by RefSeq
