

CDKN1A & SKP2 Protein Protein Interaction Antibody Pair

Catalog # DI0568 Size 1 Set

Applications

Representative image of Proximity Ligation Assay of protein-protein interactions between CDKN1A and SKP2. HeLa cells were stained with anti-CDKN1A rabbit purified polyclonal antibody 1:1200 and anti-SKP2 mouse purified polyclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex. The images were analyzed using an optimized freeware (BlobFinder) download from The Centre for Image Analysis at Uppsala University.

Specification

| | |
|--------------------------------|---|
| Product Description | This protein protein interaction antibody pair set comes with two antibodies to detect the protein-protein interaction, one against the CDKN1A protein, and the other against the SKP2 protein for use in <i>i</i>n situ Proximity Ligation Assay . See Publication Reference below. |
| Reactivity | Human |
| Quality Control Testing | Protein protein interaction immunofluorescence result. Representative image of Proximity Ligation Assay of protein-protein interactions between CDKN1A and SKP2. HeLa cells were stained with anti-CDKN1A rabbit purified polyclonal antibody 1:1200 and anti-SKP2 mouse purified polyclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex. The images were analyzed using an optimized freeware (BlobFinder) download from The Centre for Image Analysis at Uppsala University. |
| Supplied Product | Antibody pair set content: 1. CDKN1A rabbit purified polyclonal antibody (100 ug) 2. SKP2 mouse purified polyclonal antibody (40 ug) *Reagents are sufficient for at least 30-50 assays using recommended protocols. |
| Storage Instruction | Store reagents of the antibody pair set at -20°C or lower. Please aliquot to avoid repeated freeze thaw cycle. Reagents should be returned to -20°C storage immediately after use. |

Applications

- *In situ* Proximity Ligation Assay (Cell)

Gene Info — CDKN1A

| | |
|--------------------|---|
| Entrez GenelD | 1026 |
| Gene Name | CDKN1A |
| Gene Alias | CAP20, CDKN1, CIP1, MDA-6, P21, SDI1, WAF1, p21CIP1 |
| Gene Description | cyclin-dependent kinase inhibitor 1A (p21, Cip1) |
| Omim ID | 116899 |
| Gene Ontology | Hyperlink |
| Gene Summary | This gene encodes a potent cyclin-dependent kinase inhibitor. The encoded protein binds to and inhibits the activity of cyclin-CDK2 or -CDK4 complexes, and thus functions as a regulator of cell cycle progression at G1. The expression of this gene is tightly controlled by the tumor suppressor protein p53, through which this protein mediates the p53-dependent cell cycle G1 phase arrest in response to a variety of stress stimuli. This protein can interact with proliferating cell nuclear antigen (PCNA), a DNA polymerase accessory factor, and plays a regulatory role in S phase DNA replication and DNA damage repair. This protein was reported to be specifically cleaved by CASP3-like caspases, which thus leads to a dramatic activation of CDK2, and may be instrumental in the execution of apoptosis following caspase activation. Two alternatively spliced variants, which encode an identical protein, have been reported. [provided by RefSeq] |
| Other Designations | CDK-interaction protein 1 DNA synthesis inhibitor OTTHUMP00000016298 cyclin-dependent kinase inhibitor 1A melanoma differentiation associated protein 6 wild-type p53-activated fragment 1 |

Gene Info — SKP2

| | |
|------------------|---|
| Entrez GenelD | 6502 |
| Gene Name | SKP2 |
| Gene Alias | FBL1, FBXL1, FLB1, MGC1366 |
| Gene Description | S-phase kinase-associated protein 2 (p45) |
| Omim ID | 601436 |
| Gene Ontology | Hyperlink |

Gene Summary

This gene encodes a member of the F-box protein family which is characterized by an approximately 40 amino acid motif, the F-box. The F-box proteins constitute one of the four subunits of ubiquitin protein ligase complex called SCFs (SKP1-cullin-F-box), which function in phosphorylation-dependent ubiquitination. The F-box proteins are divided into 3 classes: Fbws containing WD-40 domains, Fbls containing leucine-rich repeats, and Fbxs containing either different protein-protein interaction modules or no recognizable motifs. The protein encoded by this gene belongs to the Fbls class; in addition to an F-box, this protein contains 10 tandem leucine-rich repeats. This protein is an essential element of the cyclin A-CDK2 S-phase kinase. It specifically recognizes phosphorylated cyclin-dependent kinase inhibitor 1B (CDKN1B, also referred to as p27 or KIP1) predominantly in S phase and interacts with S-phase kinase-associated protein 1 (SKP1 or p19). In addition, this gene is established as a protooncogene causally involved in the pathogenesis of lymphomas. Alternative splicing of this gene generates 2 transcript variants encoding different isoforms. [provided by RefSeq]
