

PRKCZ FISH Probe

Catalog # FA0002 Size 200 uL

Specification	
Product Description	Made to order FISH probes for identification of gene amplification using Fluorescent In Situ Hybridiz ation Technique. (Technology).
Origin	Human
Source	Genomic DNA
Reactivity	Human
Notice	We strongly recommend the customer to use FFPE FISH PreTreatment Kit 1 (Catalog #: KA2375 or KA2691) for the pretreatment of Formalin-Fixed Paraffin-Embedded (FFPE) tissue sections.
Regulation Status	For research use only (RUO)
Supplied Product	DAPI Counterstain (1500 ng/mL) 250 uL
Storage Instruction	Store at 4°C in the dark.

Applications

• Fluorescent In Situ Hybridization (Cell)

Gene Info — PRKCZ		
Entrez GenelD	<u>5590</u>	
Gene Name	PRKCZ	
Gene Alias	PKC-ZETA, PKC2	
Gene Description	protein kinase C, zeta	

Product Information

Omim ID	<u>176982</u>
Gene Ontology	<u>Hyperlink</u>
Gene Summary	Protein kinase C (PKC) zeta is a member of the PKC family of serine/threonine kinases which ar e involved in a variety of cellular processes such as proliferation, differentiation and secretion. Unli ke the classical PKC isoenzymes which are calcium-dependent, PKC zeta exhibits a kinase activity which is independent of calcium and diacylglycerol but not of phosphatidylserine. Furthermore, it is insensitive to typical PKC inhibitors and cannot be activated by phorbol ester. Unlike the classical PKC isoenzymes, it has only a single zinc finger module. These structural and biochemical properties indicate that the zeta subspecies is related to, but distinct from other isoenzymes of PKC. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq
