

# HER2/TOP2A/CEN17 FISH Probe

Catalog # FG0257      Size 100 uL

## Applications

Hybridization position of the probes on the chromosome.

Hybridization position of the probes on the chromosome.

## Specification

### Product Description

Labeled FISH probes for identification of gene translocation using Fluorescent In Situ Hybridization Technique. ([Technology](#)).

### Probe 1

**Name:** HER2  
**Size:** Approximately 510kb  
**Fluorophore:** FITC  
**Location:** 17q12

### Probe 2

**Name:** TOP2A  
**Size:** Approximately 450kb  
**Fluorophore:** TAMRA  
**Location:** 17q21

<b>Probe 3</b>	<b>Name:</b> CEN17(D17Z1) <b>Size:</b> DEAC <b>Fluorophore:</b> 17p11.1-17q11.1 <b>Location:</b>
<b>Origin</b>	Human
<b>Source</b>	Genomic DNA
<b>Reactivity</b>	Human
<b>Form</b>	Liquid
<b>Notice</b>	We <b>strongly recommend</b> the customer to use FFPE FISH PreTreatment Kit 1 (Catalog #: <a href="#">KA2375</a> or <a href="#">KA2691</a> ) for the pretreatment of Formalin-Fixed Paraffin-Embedded (FFPE) tissue sections.
<b>Regulatory Status</b>	For research use only (RUO)
<b>Quality Control Testing</b>	Representative images of normal human cell (lymphocyte) stain with the dual color FISH probe. The left image is chromosomes at metaphase, and the right image is an interphase nucleus.
<b>Supplied Product</b>	DAPI Counterstain (1500 ng/mL ) 125 uL for each 100 uL FISH Probe
<b>Storage Instruction</b>	Store at 4°C in the dark.
<b>Note</b>	Hybridization position of the probes on the chromosome. Hybridization position of the probes on the chromosome.
<b>Self-Attestation</b>	<a href="#">Abnova self-attests to comply with the U.S. Framework for Nucleic Acid Synthesis Screening</a>

## Applications

- Fluorescent In Situ Hybridization (Cell)

## Gene Info — ERBB2

<b>Entrez GeneID</b>	<a href="#">2064</a>
<b>Gene Name</b>	ERBB2
<b>Gene Alias</b>	CD340, HER-2, HER-2/neu, HER2, NEU, NGL, TKR1
<b>Gene Description</b>	v-erb-b2 erythroblastic leukemia viral oncogene homolog 2, neuro/glioblastoma derived oncogene homolog (avian)

**Omim ID** [137215 137800 164870 211980](#)

**Gene Ontology** [Hyperlink](#)

**Gene Summary** This gene encodes a member of the epidermal growth factor (EGF) receptor family of receptor tyrosine kinases. This protein has no ligand binding domain of its own and therefore cannot bind growth factors. However, it does bind tightly to other ligand-bound EGF receptor family members to form a heterodimer, stabilizing ligand binding and enhancing kinase-mediated activation of downstream signalling pathways, such as those involving mitogen-activated protein kinase and phosphatidylinositol-3 kinase. Allelic variations at amino acid positions 654 and 655 of isoform a (positions 624 and 625 of isoform b) have been reported, with the most common allele, Ile654/Ile655, shown here. Amplification and/or overexpression of this gene has been reported in numerous cancers, including breast and ovarian tumors. Alternative splicing results in several additional transcript variants, some encoding different isoforms and others that have not been fully characterized. [provided by RefSeq]

**Other Designations** c-erb B2/neu protein|erbB-2|herstatin|neuroblastoma/glioblastoma derived oncogene homolog|v-erb-b2 avian erythroblastic leukemia viral oncogene homolog 2 (neuro/glioblastoma derived oncogene homolog)

## Gene Info — TOP2A

**Entrez GeneID** [7153](#)

**Gene Name** TOP2A

**Gene Alias** TOP2, TP2A

**Gene Description** topoisomerase (DNA) II alpha 170kDa

**Omim ID** [126430](#)

**Gene Ontology** [Hyperlink](#)

**Gene Summary** This gene encodes a DNA topoisomerase, an enzyme that controls and alters the topologic state of DNA during transcription. This nuclear enzyme is involved in processes such as chromosome condensation, chromatid separation, and the relief of torsional stress that occurs during DNA transcription and replication. It catalyzes the transient breaking and rejoining of two strands of duplex DNA which allows the strands to pass through one another, thus altering the topology of DNA. Two forms of this enzyme exist as likely products of a gene duplication event. The gene encoding this form, alpha, is localized to chromosome 17 and the beta gene is localized to chromosome 3. The gene encoding this enzyme functions as the target for several anticancer agents and a variety of mutations in this gene have been associated with the development of drug resistance. Reduced activity of this enzyme may also play a role in ataxia-telangiectasia. [provided by RefSeq]

**Other Designations** DNA topoisomerase II, 170 kD|DNA topoisomerase II, alpha isozyme|topoisomerase (DNA) II alpha (170kD)
