mutaFISH™ IFNGwt RNA Probes

Catalog # FP0031 Size 1 Probe Set

Applications

mutation specific, Fluorescence *In Situ* Hybridization (Cells)

mutaFISH™ staining was performed *in situ* in IFNG transfected 293T cells. IFNG gene was detected via green signal (FITC).

Specification

Product Description	mutaFISH™ IFNGwt RNA Probes is designed to detect human IFNG gene on single strand RNA in c ells using padlock probe and *in situ* rolling-circle amplification technology.
Reactivity	Human
Supplied Products	Content: 1. RT IFNG Primer 2. mutaFISH™ IFNGwt RNA Probe 3. Detection Probe-FITC
Technology	mutaFISH™ (mutation-specific Fluorescence *In Situ* Hybridization)
Comparison	FISH Probes vs mutaFISH™ Probes
Fluorophore	FITC (Excitation Peak (nm): 495; Emission Peak (nm): 519)
Probe Position	

Copyright © 2023 Abnova Corporation. All Rights Reserved.

Regulatory Status	For research use only (RUO)
Storage Instruction	Store at -20°C. Aliquot to avoid repeated freezing and thawing.
Note	We recommend mutaFISH™ RNA Accessory Kit (Catalog #: KA4915) which provides necessary re agents and enzymes for *in situ* reverse transcription, RNA digestion, mutaFISH™ hybridization, ligati on and amplication prior to mutaFISH™.
Self-Attestation	Abnova self-attests to comply with the U.S. Framework for Nucleic Acid Synthesis Screening
Video	

Applications

- mutation specific, Fluorescence *In Situ* Hybridization (Cells)

  mutaFISH™ staining was performed *in situ* in IFNG transfected 293T cells. IFNG gene was detected via green signal (FITC).

Gene Info — IFNG

Entrez GeneID	3458
Gene Name	IFNG
Gene Alias	IFG, IFI
Gene Description	interferon, gamma
Omim ID	147570 191100 607948 609135 609423
Gene Ontology	Hyperlink

Gene Summary	Interferon-gamma (IFNG), or type II interferon, is a cytokine critical for innate and adaptive immunity against viral and intracellular bacterial infections and for tumor control. Aberrant IFNG expression is associated with a number of autoinflammatory and autoimmune diseases. The importance of IFNG in the immune system stems in part from its ability to inhibit viral replication directly, but most importantly derives from its immunostimulatory and immunomodulatory effects. IFNG is produced predominantly by natural killer (NK) and natural killer T (NKT) cells as part of the innate immune response, and by CD4 (MIM 186940) and CD8 (see MIM 186910) cytotoxic T lymphocyte (CTL) effector T cells once antigen-specific immunity develops (Schoenborn and Wilson, 2007 [PubMed 17981204]).[supplied by OMIM
