

ACTN4 (Human) Matched Antibody Pair

Catalog # H00000081-AP42 Size 1 Set

Applications

Sandwich ELISA detection sensitivity ranging from 0.1 ng/ml to 100 ng/ml.

Specification

Product Description	This antibody pair set comes with a matched antibody pair to detect and quantify the protein level of human ACTN4.
Reactivity	Human
Interspecies Antigen Sequence	Mouse (98%); Rat (98%)
Quality Control Testing	Standard curve using recombinant protein (H00000081-Q01) as an analyte. Sandwich ELISA detection sensitivity ranging from 0.1 ng/ml to 100 ng/ml.
Supplied Product	Antibody pair set content: 1. Capture antibody: mouse monoclonal anti-ACTN4, IgG2a Kappa (100 ug) 2. Detection antibody: biotinylated mouse monoclonal anti-ACTN4, IgG2a (50 ug) *Reagents are sufficient for at least 3-5 x 96 well plates using recommended protocols.
Storage Instruction	Store reagents of the antibody pair set at -20°C or lower. Please aliquot to avoid repeated freeze thaw cycle. Reagents should be returned to -20°C storage immediately after use.

Applications

- ELISA Pair (Recombinant protein)

Gene Info — ACTN4

Entrez GeneID [81](#)

Gene Name ACTN4

Gene Alias ACTNIN-4, DKFZp686K23158, FSGS, FSGS1

Gene Description actinin, alpha 4

Omim ID [603278 604638](#)

Gene Ontology [Hyperlink](#)

Gene Summary

Alpha actinins belong to the spectrin gene superfamily which represents a diverse group of cytoskeletal proteins, including the alpha and beta spectrins and dystrophins. Alpha actinin is an actin-binding protein with multiple roles in different cell types. In nonmuscle cells, the cytoskeletal isoform is found along microfilament bundles and adherens-type junctions, where it is involved in binding actin to the membrane. In contrast, skeletal, cardiac, and smooth muscle isoforms are localized to the Z-disc and analogous dense bodies, where they help anchor the myofibrillar actin filaments. This gene encodes a nonmuscle, alpha actinin isoform which is concentrated in the cytoplasm, and thought to be involved in metastatic processes. Mutations in this gene have been associated with focal and segmental glomerulosclerosis. [provided by RefSeq]

Other Designations actinin alpha4 isoform
