Gene Description	annexin A4
Omim ID	106491
Gene Ontology	Hyperlink
Gene Summary	Annexin IV (ANX4) belongs to the annexin family of calcium-dependent phospholipid binding proteins. Although their functions are still not clearly defined, several members of the annexin family have been implicated in membrane-related events along exocytotic and endocytotic pathways. ANX4 has 45 to 59% identity with other members of its family and shares a similar size and exon-intron organization. Isolated from human placenta, ANX4 encodes a protein that has possible interactions with ATP, and has in vitro anticoagulant activity and also inhibits phospholipase A2 activity. ANX4 is almost exclusively expressed in epithelial cells. [provided by RefSeq]
Other Designations	annexin IV annexin IV (placental anticoagulant protein II) placental anticoagulant protein II proliferation-inducing gene 28 proliferation-inducing protein 28
