Gene Name RHOH

Gene Alias ARHH, TTF

Gene Description ras homolog gene family, member H

Omim ID [602037](#)

Gene Ontology [Hyperlink](#)

Gene Summary The protein encoded by this gene is a member of the Ras superfamily of small GTPases. Expression of a chimeric transcript of LAZ3 and this gene has been reported as a result of the translocation t(3;4) in non-Hodgkin's lymphomas. This gene encodes a small G-like protein, and unlike most other small G proteins which are expressed ubiquitously, this gene is transcribed only in hemopoietic cells. [provided by RefSeq]

Other Designations TTF, translocation three four|rho-related GTP-binding protein
