Gene Name FHIT

Gene Alias AP3Aase, FRA3B

Gene Description fragile histidine triad gene

Omim ID [601153](#)

Gene Ontology [Hyperlink](#)

Gene Summary This gene, a member of the histidine triad gene family, encodes a diadenosine 5',5'''-P1,P3-triphosphate hydrolase involved in purine metabolism. The gene encompasses the common fragile site FRA3B on chromosome 3, where carcinogen-induced damage can lead to translocations and aberrant transcripts of this gene. In fact, aberrant transcripts from this gene have been found in about half of all esophageal, stomach, and colon carcinomas. [provided by RefSeq]
