

MaxPab®

# GH1 purified MaxPab rabbit polyclonal antibody (D01P)

Catalog # H00002688-D01P

Size 100 ug

## Applications

### Western Blot (Transfected lysate)

Western Blot analysis of GH1 expression in transfected 293T cell line ([H00002688-T01](#)) by GH1 MaxPab polyclonal antibody.

Lane 1: GH1 transfected lysate(24.80 KDa).

Lane 2: Non-transfected lysate.

## Specification

|                         |                                                                                                                                                                                                                                     |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Product Description     | Rabbit polyclonal antibody raised against a full-length human GH1 protein.                                                                                                                                                          |
| Immunogen               | GH1 (AAH75012.1, 1 a.a. ~ 217 a.a) full-length human protein.                                                                                                                                                                       |

## Gene Info — GH1

Entrez GeneID [2688](#)

GeneBank Accession# [NM\\_000515](#)

Protein Accession# [AAH75012.1](#)

Gene Name GH1

Gene Alias GH, GH-N, GHN, hGH-N

Gene Description growth hormone 1

Omim ID [139250](#) [173100](#) [262400](#) [262650](#) [604271](#)

Gene Ontology [Hyperlink](#)

**Gene Summary**

The protein encoded by this gene is a member of the somatotropin/prolactin family of hormones which play an important role in growth control. The gene, along with four other related genes, is located at the growth hormone locus on chromosome 17 where they are interspersed in the same transcriptional orientation; an arrangement which is thought to have evolved by a series of gene duplications. The five genes share a remarkably high degree of sequence identity. Alternative splicing generates additional isoforms of each of the five growth hormones, leading to further diversity and potential for specialization. This particular family member is expressed in the pituitary but not in placental tissue as is the case for the other four genes in the growth hormone locus. Mutations in or deletions of the gene lead to growth hormone deficiency and short stature. [provided by RefSeq]

**Other Designations** pituitary growth hormone
