Entrez GenelD	3148
GeneBank Accession#	<u>BC000903</u>
Protein Accession#	<u>AAH00903.2</u>
Gene Name	HMGB2
Gene Alias	HMG2
Gene Description	high-mobility group box 2
Omim ID	<u>163906</u>
Gene Ontology	Hyperlink
Gene Summary	This gene encodes a member of the non-histone chromosomal high mobility group protein family. The proteins of this family are chromatin-associated and ubiquitously distributed in the nucleus of higher eukaryotic cells. In vitro studies have demonstrated that this protein is able to efficiently ben d DNA and form DNA circles. These studies suggest a role in facilitating cooperative interactions between cis-acting proteins by promoting DNA flexibility. This protein was also reported to be inv olved in the final ligation step in DNA end-joining processes of DNA double-strand breaks repair and V(D)J recombination. [provided by RefSeq
Other Designations	high-mobility group (nonhistone chromosomal) protein 2
