

MICA (Human) Matched Antibody Pair

Catalog # H00004276-AP21

Size 1 Set

Applications

Sandwich ELISA detection sensitivity ranging from 3 ng/ml to 100 ng/ml.

Specification

Product Description	This antibody pair set comes with a matched antibody pair to detect and quantify the protein level of human MICA.
Reactivity	Human
Quality Control Testing	Standard curve using recombinant protein (H00004276-P01) as an analyte. Sandwich ELISA detection sensitivity ranging from 3 ng/ml to 100 ng/ml.
Supplied Product	Antibody pair set content: 1. Capture antibody: rabbit MaxPab® affinity purified polyclonal anti-MICA (100 ug) 2. Detection antibody: mouse purified polyclonal anti-MICA (20 ug) *Reagents are sufficient for at least 1-2 x 96 well plates using recommended protocols.
Storage Instruction	Store reagents of the antibody pair set at -20°C or lower. Please aliquot to avoid repeated freeze thaw cycle. Reagents should be returned to -20°C storage immediately after use.

Applications

- ELISA Pair (Recombinant protein)

Gene Info — MICA

Entrez GeneID	4276
Gene Name	MICA
Gene Alias	FLJ60820, MGC111087, PERB11.1
Gene Description	MHC class I polypeptide-related sequence A
Omim ID	600169
Gene Ontology	Hyperlink
Gene Summary	MICA encodes the highly polymorphic MHC (HLA) class I chain-related gene A. The protein product is expressed on the cell surface, although unlike canonical class I molecules does not seem to associate with beta-2-microglobulin. It is thought that MICA functions as a stress-induced antigen that is broadly recognized by intestinal epithelial gamma delta T cells. [provided by RefSeq]
Other Designations	HLA class I antigen MHC class I chain-related gene A protein MHC class I chain-related protein A OTTHUMP00000029088 OTTHUMP00000035033 OTTHUMP00000035034 Stress inducible class I homolog
