Gene Summary	This gene encodes a member of the tripartite motif (TRIM) family. The TRIM motif includes three zi nc-binding domains, a RING, a B-box type 1 and a B-box type 2, and a coiled-coil region. The enc oded protein is part of the RoSSA ribonucleoprotein, which includes a single polypeptide and one of four small RNA molecules. The RoSSA particle localizes to both the cytoplasm and the nucleus. RoSSA interacts with autoantigens in patients with Sjogren syndrome and systemic lupus erythem atosus. Alternatively spliced transcript variants for this gene have been described but the full-lengt h nature of only one has been determined. [provided by RefSeq
