Gene Info — STAT4

Entrez GeneID	6775
Gene Name	STAT4
Gene Alias	SLEB11
Gene Description	signal transducer and activator of transcription 4
Omim ID	152700 180300 600558
Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene is a member of the STAT family of transcription factors. In response to cytokines and growth factors, STAT family members are phosphorylated by the receptor associated kinases, and then form homo- or heterodimers that translocate to the cell nucleus where they act as transcription activators. This protein is essential for mediating responses to IL12 in lymphocytes, and regulating the differentiation of T helper cells. [provided by RefSeq]
