Gene Name	TARBP2
Gene Alias	LOQS, TRBP, TRBP1, TRBP2
Gene Description	TAR (HIV-1) RNA binding protein 2
Omim ID	<u>605053</u>
Gene Ontology	<u>Hyperlink</u>
Gene Summary	HIV-1, the causative agent of acquired immunodeficiency syndrome (AIDS), contains an RNA gen ome that produces a chromosomally integrated DNA during the replicative cycle. Activation of HIV -1 gene expression by the transactivator Tat is dependent on an RNA regulatory element (TAR) lo cated downstream of the transcription initiation site. The protein encoded by this gene binds betw een the bulge and the loop of the HIV-1 TAR RNA regulatory element and activates HIV-1 gene ex pression in synergy with the viral Tat protein. Alternative splicing results in multiple transcript varia nts encoding different isoforms. This gene also has a pseudogene. [provided by RefSeq
