Gene Name CLEC2D

Gene Alias CLAX, LLT1, OCIL

Gene Description C-type lectin domain family 2, member D

Omim ID [605659](#)

Gene Ontology [Hyperlink](#)

**Gene Summary** This gene encodes a member of the natural killer cell receptor C-type lectin family. The encoded protein inhibits osteoclast formation and contains a transmembrane domain near the N-terminus as well as the C-type lectin-like extracellular domain. Several alternatively spliced transcript variants have been identified, but the full-length nature of every transcript has not been defined. [provided by RefSeq]
