Protein Accession#	NP_038472
Gene Name	UBQLN2
Gene Alias	CHAP1, CHAP1/DSK2, Dsk2, HRIHFB2157, LIC-2, N4BP4, PLIC-2, PLIC2, RIHFB2157
Gene Description	ubiquilin 2
Omim ID	300264
Gene Ontology	Hyperlink
Gene Summary	This gene encodes an ubiquitin-like protein (ubiquilin) that shares high degree of similarity with related products in yeast, rat and frog. Ubiquilins contain a N-terminal ubiquitin-like domain and a C-terminal ubiquitin-associated domain. They physically associate with both proteasomes and ubiquitin ligases, and thus thought to functionally link the ubiquitination machinery to the proteasome to affect in vivo protein degradation. This ubiquilin has also been shown to bind the ATPase domain of the Hsp70-like Stch protein. [provided by RefSeq]
Other Designations	Nedd4 binding protein 4 bA431N15.1 (ubiquilin 2)
