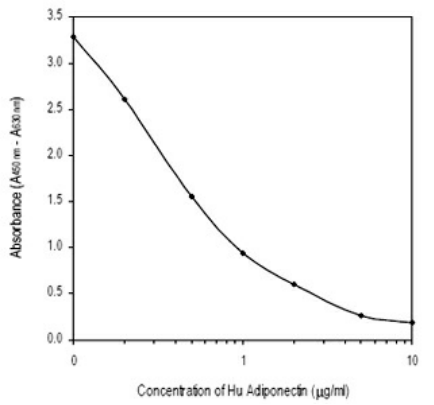
ADIPOQ (Human) ELISA Kit

Catalog # KA0016 Size 1 Kit

Applications



The standard curve is for the purpose of illustration only and should not be used to calculate unknowns. A standard curve should be generated each time the assay is performed.

Specification

Product Description	ADIPOQ (Human) ELISA Kit is a competitive enzyme-linked immunosorbent assay for the quantitative measurement of human adiponectin in serum and plasma.
Suitable Sample	Plasma (Citrate, EDTA, Heparin), Serum
Sample Volume	50 uL
Label	HRP-conjugate
Detection Method	Colorimetric
Assay Type	Quantitative
Intra-Assay	4.90%
Inter-Assay	6.70%
Spiking Recovery	100.20%
Limit of Detection	26 ng/mL
Reactivity	Human, Monkey

Regulation Status	For research use only (RUO)
Quality Control Testing	Standard curve The standard curve is for the purpose of illustration only and should not be used to calculate unknown s. A standard curve should be generated each time the assay is performed.
Storage Instruction	Store the kit at 4°C.

Applications

- Quantification

Gene Info — ADIPOQ

Entrez GeneID	9370
Gene Name	ADIPOQ
Gene Alias	ACDC, ACRP30, ADPN, APM-1, APM1, GBP28, adiponectin
Gene Description	adiponectin, C1Q and collagen domain containing
Omim ID	605441
Gene Ontology	Hyperlink
Gene Summary	This gene is expressed in adipose tissue exclusively. It encodes a protein with similarity to collag ens X and VIII and complement factor C1q. The encoded protein circulates in the plasma and is in volved with metabolic and hormonal processes. [provided by RefSeq
Other Designations	adipocyte, C1Q and collagen domain containing|adipocyte, C1Q and collagen domain-containing |adiponectin|adipose most abundant gene transcript 1|gelatin-binding protein 28

Publication Reference

- The determination of copeptin levels helps management decisions among transient ischaemic attack patients.
