

ADIPOQ (Human) ELISA Kit

Catalog # KA0017

Size 1 Kit

Applications

The standard curve is for the purpose of illustration only and should not be used to calculate unknowns. A standard curve should be generated each time the assay is performed.

Specification

Product Description

ADIPOQ (Human) High Sensitivity ELISA Kit is a sandwich enzymelinked immunosorbent assay for the quantitative measurement of human adiponectin.

Suitable Sample

Breast Milk, Cerebrospinal Fluid, Plasma (Citrate, EDTA, Heparin), Serum, Urine

Sample Volume

100 μ L

Label

HRP-conjugate

Detection Method

Colorimetric

Assay Type

Quantitative

Calibration Range

1 to 100 ng/mL

Limit of Detection

0.47 ng/mL (serum, plasma), 0.156 ng/mL (urine, CSF)

Reactivity

Cat, Dog, Hamster, Human, Monkey, Rat

Regulation Status

For research use only (RUO)

Quality Control Testing

Standard curve

The standard curve is for the purpose of illustration only and should not be used to calculate unknowns. A standard curve should be generated each time the assay is performed.

Storage Instruction

Store the kit at 4°C.

Applications

- Quantification

Gene Info — ADIPOQ

Entrez GeneID	9370
Gene Name	ADIPOQ
Gene Alias	ACDC, ACRP30, ADPN, APM-1, APM1, GBP28, adiponectin
Gene Description	adiponectin, C1Q and collagen domain containing
Omim ID	605441
Gene Ontology	Hyperlink
Gene Summary	This gene is expressed in adipose tissue exclusively. It encodes a protein with similarity to collagens X and VIII and complement factor C1q. The encoded protein circulates in the plasma and is involved with metabolic and hormonal processes. [provided by RefSeq]
Other Designations	adipocyte, C1Q and collagen domain containing adipocyte, C1Q and collagen domain-containing adiponectin adipose most abundant gene transcript 1 gelatin-binding protein 28
