

ORANGE Peroxidase Substrate Kit

Catalog # KA0563

Size 1 Kit

Applications

This kit demonstrates class III beta-tubulin in retinal pigment epithelial cells.

Specification

Product Description

Metal enhanced DAB technology permits detection of extremely low concentrations of tissue antigens. This kit provides a sensitive means for detecting peroxidase labeled antibodies and conjugates. ORANGE Peroxidase Substrate Kit contains nickel enhanced DAB that produces an orange-red DAB polymer and also exceeds the sensitivity of DAB alone.

Regulation Status

For research use only (RUO)

Quality Control Testing

IHC demonstration data
This kit demonstrates class III beta-tubulin in retinal pigment epithelial cells.

Storage Instruction

Store the kit at 4°C.

Applications

- Immunohistochemistry
