

C5 (Human) ELISA Kit

Catalog # KA2114

Size 1 Kit

Applications

The standard curve is for the purpose of illustration only and should not be used to calculate unknowns. A standard curve should be generated each time the assay is performed.

Specification

Product Description	C5 (Human) ELISA Kit is a sandwich enzyme immunoassay for the quantitative measurement of human C5.
Suitable Sample	Cell Culture Samples, CSF, Milk, Plasma, Saliva and Serum
Sample Volume	50 μ L
Label	Peroxidase-conjugated
Detection Method	Colorimetric
Assay Type	Quantitative
Calibration Range	0.156 to 10 ng/mL
Reactivity	Human, Monkey
Regulation Status	For research use only (RUO)
Storage Instruction	Store components of the kit at 4°C or -20°C as described in the protocol.

Applications

- Quantification

Gene Info — C5

Entrez GeneID [727](#)

Gene Name C5

Gene Alias CPAMD4, FLJ17816, FLJ17822, MGC142298

Gene Description complement component 5

Omim ID [120900](#)

Gene Ontology [Hyperlink](#)

Gene Summary

The protein encoded by this gene is the fifth component of complement, which plays an important role in inflammatory and cell killing processes. This protein is comprised of alpha and beta polypeptide chains that are linked by a disulfide bridge. An activation peptide, C5a, which is an anaphylatoxin that possesses potent spasmogenic and chemotactic activity, is derived from the alpha polypeptide via cleavage with a convertase. The C5b macromolecular cleavage product can form a complex with the C6 complement component, and this complex is the basis for formation of the membrane attack complex, which includes additional complement components. Mutations in this gene cause complement component 5 deficiency, a disease where patients show a propensity for severe recurrent infections. Defects in this gene have also been linked to a susceptibility to liver fibrosis and to rheumatoid arthritis. [provided by RefSeq]

Other Designations OTTHUMP00000022001|anaphylatoxin C5a analog
