

CCR5 (Human) Cell-Based ELISA Kit

Catalog # KA2647

Size 1 Kit

Specification

Product Description	CCR5 (Human) Cell-Based ELISA Kit is an indirect enzyme-linked immunoassay for qualitative determination of CCR5 expression in cultured cells.
Suitable Sample	Attached Cell, Loosely Attached Cell, Suspension Cell
Label	HRP-conjugated
Detection Method	Colorimetric
Assay Type	Qualitative
Reactivity	Human
Regulation Status	For research use only (RUO)
Storage Instruction	Store the kit at 4°C.

Applications

- Qualitative

Gene Info — CCR5

Entrez GeneID	1234
Protein Accession#	P51681
Gene Name	CCR5
Gene Alias	CC-CKR-5, CCCKR5, CD195, CKR-5, CKR5, CMKBR5, IDDM22
Gene Description	chemokine (C-C motif) receptor 5

Omim ID [601373 610379](#)

Gene Ontology [Hyperlink](#)

Gene Summary

This gene encodes a member of the beta chemokine receptor family, which is predicted to be a seven transmembrane protein similar to G protein-coupled receptors. This protein is expressed by T cells and macrophages, and is known to be an important co-receptor for macrophage-tropic virus, including HIV, to enter host cells. Defective alleles of this gene have been associated with the HIV infection resistance. The ligands of this receptor include monocyte chemoattractant protein 2 (MCP-2), macrophage inflammatory protein 1 alpha (MIP-1 alpha), macrophage inflammatory protein 1 beta (MIP-1 beta) and regulated on activation normal T expressed and secreted protein (RANTES). Expression of this gene was also detected in a promyeloblastic cell line, suggesting that this protein may play a role in granulocyte lineage proliferation and differentiation. This gene is located at the chemokine receptor gene cluster region. Two transcript variants encoding the same protein have been found for this gene. [provided by RefSeq]

Other Designations

C-C chemokine receptor 5|C-C chemokine receptor type 5|CCR5 chemokine receptor|chemokine (C-C) receptor 5|chemokine receptor CCR5|chemr13
