

# Glucose Uptake Assay Kit (Red Fluorescence)

Catalog # KA4085 Size 1 Kit

## **Applications**

Measurement of 2DG uptake in differentiated 3T3-L1 adipocytes and 3T3-L1 fibroblasts.

Measurement of 2DG uptake in differentiated 3T3-L1 adipocytes and 3T3-L1 fibroblasts.

Assays were performed with Glucose Uptake Assay Kit (Red Fluorescence) (Cat # KA4085) in a black wall/clear bottom cell culture Poly-D lysine plate using a Gemini (Molecular Devices) microplate reader. (A: Negative Control, no insulin no 2DG treatment. B: 2DG uptake in the absence of insulin. C: 2DG uptake in the presence of 1 uM insulin. D: 2DG uptake in the presence of 1 uM insulin and 200 uM phloretin. E: 2DG uptake in the presence of 1 uM insulin and 5mM D-Glucose.) (Please refer to the protocol for detailed operations).

Specification	
Product Description	Glucose Uptake Assay Kit (Red Fluorescence) is used for the measurement of glucose uptake.
Suitable Sample	Live Cells
Excitation/ Emission (nm)	540/590 nm
Detection Method	Fluorometric
Instrument Platform	Microplate Readers
Regulation Status	For research use only (RUO)
Storage Instruction	Store the kit in desiccated environment at -20°C and avoid from light.

#### **Product Information**

Note

Measurement of 2DG uptake in differentiated 3T3-L1 adipocytes and 3T3-L1 fibroblasts.

Measurement of 2DG uptake in differentiated 3T3-L1 adipocytes and 3T3-L1 fibroblasts.

Assays were performed with Glucose Uptake Assay Kit (Red Fluorescence) (Cat # KA4085) in a bla ck wall/clear bottom cell culture Poly-D lysine plate using a Gemini (Molecular Devices) microplate re ader. (A: Negative Control, no insulin no 2DG treatment. B: 2DG uptake in the absence of insulin. C: 2DG uptake in the presence of 1 uM insulin. D: 2DG uptake in the presence of 1 uM insulin and 200 uM phloretin. E: 2DG uptake in the presence of 1 uM insulin and 5mM D-Glucose.) (Please refer to the protocol for detailed operations).

### **Applications**

Quantification
