Gene Summary	This gene encodes a protein with an N-terminal RCC1 domain and a C-terminal BTB (broad com plex, tramtrack and bric-a-brac) domain. In rat, over-expression of this gene in vascular smooth m uscle cells induced cellular hypertrophy. In rat, the C-terminus of RCBTB1 interacts with the angiot ensin II receptor-1A. In humans, this gene maps to a region of chromosome 13q that is frequently deleted in B-cell chronic lymphocytic leukemia and other lymphoid malignancies. [provided by Ref Seq
