

Factor VIIa (Human) Chromogenic Activity Assay Kit

Catalog # KA6026

Size 1 Kit

Applications

The standard curve is for the purpose of illustration only and should not be used to calculate unknowns. A standard curve should be generated each time the assay is performed.

Specification

Product Description

Factor VIIa (Human) Chromogenic Activity Assay Kit is developed to determine FVIIa activity in human plasma, serum, and cell culture samples. This assay couples immunofunctional and indirect amidolytic function.

Suitable Sample

Cell Culture Supernatants, Plasma and Serum.

Sample Volume

100 μ L

Calibration Range

0.438 to 28 AU/mL or 7.813 to 500 ng/mL

Reactivity

Human

Regulatory Status

For research use only (RUO)

Quality Control Testing

Standard curve

The standard curve is for the purpose of illustration only and should not be used to calculate unknowns. A standard curve should be generated each time the assay is performed.

Storage Instruction

Store components of the kit at 4°C or -20°C as described in the protocol.

Applications

- Functional Study

Gene Info — F7

Entrez GeneID [2155](#)

Protein Accession# [P08709](#)

Gene Name F7

Gene Alias -

Gene Description coagulation factor VII (serum prothrombin conversion accelerator)

Omim ID [227500](#)

Gene Ontology [Hyperlink](#)

Gene Summary This gene encodes coagulation factor VII which is a vitamin K-dependent factor essential for hemostasis. This factor circulates in the blood in a zymogen form, and is converted to an active form by either factor IXa, factor Xa, factor XIIa, or thrombin by minor proteolysis. Upon activation of the factor VII, a heavy chain containing a catalytic domain and a light chain containing 2 EGF-like domains are generated, and two chains are held together by a disulfide bond. In the presence of factor I and calcium ions, the activated factor then further activates the coagulation cascade by converting factor IX to factor IXa and/or factor X to factor Xa. Alternative splicing of this gene results in 2 transcripts. Defects in this gene can cause coagulopathy. [provided by RefSeq]
