Gamma-Glutamyl Transferase Assay Kit

Catalog # KA7488 Size 1 Kit

Applications

Qualitative

GGT activity was determined in triplicate following the protocol. The values were 9.4 ± 0.22 U/L for bovine serum, 6.5 ± 0.56 U/L for human serum, 0.77 ± 0.15 U/L for canine plasma, 7.3 ± 0.22 U/L for HEPG2 cell lysate (1.04 mg/mL protein). These values are examples and are not intended as expected values.

Specification

Product Description	Gamma-Glutamyl Transferase Assay Kit for quantitative determination of gamma-glutamyl transferase enzyme activity in biological samples.
Available Test	100 tests
Detection Method	OD 405 nm
Limit of Detection	0.7 U/L
Regulatory Status	For research use only (RUO)
Storage Instruction	Store at -20°C. Avoid multiple freeze-thaw cycles.

Applications

- Qualitative

  GGT activity was determined in triplicate following the protocol. The values were 9.4 ± 0.22 U/L for bovine serum, 6.5 ± 0.56 U/L for human serum, 0.77 ± 0.15 U/L for canine plasma, 7.3 ± 0.22 U/L for HEPG2 cell lysate (1.04 mg/mL protein). These values are examples and are not intended as expected values.
